Contents

<i>Table No.</i>	<i>List of Tables</i>	<i>Page No.</i>
	Symbols	1
1.	Rolled steel Equal Angles	2
2.	Rolled steel unequal Angles	6
3.	Rolled steel TEE bars	10
4.	Rolled steel Beams	12
5.	Rolled steel Channels	16
6.	Properties of two equal angles back to back	18
7.	Properties of two unequal angles back to back (Longer legs)	22
8.	Properties of two unequal angles back to back (Shorter legs)	26
9.	Properties of starred angles two equal angles	30
10.	Properties of Starred angles two unequal angles	31
11.	Single joist with additional plates on both flanges (Girders)	32
12.	Single joist with channel and plates on both flanges (Columns)	36
13.	Single joist with additional plates on both flanges (Columns)	48
14.	Two joists of same size with flanges butting and welded (Columns)	54
15.	Two joists of same size laced or battened (Columns)	55
16.	Two channels of same size laced or battened (Columns)	60
17.	Double channels will Flanges butting and welded Toe to Toe (Columns)	69
18.	Edge distance of holes	70
19.	Permissible stress in axial compression	70
20.	Areas of groups of round bars	71
21.	Perimeter of round bars	71
22.	Round Bars	72

<i>Table No.</i>	<i>List of Tables</i>	<i>Page No.</i>
23.	Square Bars	73
24.	Mild Steel flats (weights)	74
25.	Mild Steel flats (cross sectional area)	76
26.	Moment of Inertia of two flanges per centimetre width about X-X-axis	78
27.	Moment of Inertia of one web plate about its X-X-axis	80
28.	Reduction for area for rivet holes	81
29.	Strip	82
30.	Sheet	84
31.	Safe loads for single angle struts (single bolt)	86
32.	Safe load for single angle struts (double bolt)	88
33.	Areas of round bars in slabs per meter width for different spacings	92

SYMBOLS

Letter symbols used in this handbook shall have the meaning assigned to them as indicated below :

a	= Sectional area in sq cm	r_{uu}	= Radius of gyration about the U-U axis
b	= Width of flange	r_w	= Radius of gyration about the V-V axis
A	= The longer leg of an unequal angle or one of the legs in the case of an equal angle	r_{xx}	= Radius of gyration about the X-X axis
b	= The shorter leg of an unequal angle or one of the legs in the case of an equal angle	r_{yy}	= Radius of gyration about the Y-Y axis
C_{xx}	= The lesser of the two extreme fibre distances from the X-X axis	S	= Maximum allowable shear in the web
C_{yy}	= The lesser of the two extreme fibre distances from the Y-Y axis	t	= Thickness of angles, plates, etc.
D	= Slope of flange	t_c	= Mean thickness of compression flange
D	= The outstand of the bulb in the case of bulb angles	t_f	= Thickness of flange at the centre of the outstand
e_{xz}	= Distance of extreme fibre from the X-X axis	t_t	= Mean thickness of tension flange
	= Distance of extreme fibre from the Y-Y axis	t_2	= Thickness of web
g	= Rivet gauge distance in the flange	w	= Calculated weight in kg per m (= 0.785 a)
g_1	= Rivet gauge distance in the web	Z_c	= Modulus of extreme fibre of the compression flange
h	= Overall depth of section	Z_1	= Modulus of section based on the distance of extreme fibre of the tension flange
I_{mm}	= Moment of inertia about the U-U axis	Z_{xx}	= Modulus of section about the X-X axis
I_{vv}	= Moment of inertia about the V-V axis	Z_{yy}	= Modulus of section about the Y-Y axis
I_{xx}	= Moment of inertia about the X-X axis	$\text{Y-Y axis} =$	A line parallel to the axis of the web of the section (in the case of berams, channels and tee bars) or parallel to the axis of the longer flange (in the case of unequal angles and bulb angles) or either flange (in the case of equal angles) and passing through the centre of gravity of the profile of the section
I_x	= Product of inertia about the X-X and Y-Y axis	$X-X \text{ axis} =$	A line passing through the centre of gravity of the profile of the section, and at right angles to the Y-Y axis.
I_{yy}	= Moment of inertia about the Y-Y axis	$U-U \text{ and } V-V \text{ axis} =$	Lines passing through the centre of gravity of the profile of the section, representing the principal axis of the section
M	= Maximum allowable moment		
r_1	= Radius at root of the flange		
r_2	= Radius at toe of the flange		
r_3	= Radius of bulb corners in the case of bulb angles

- Note (1)** The properties given in this Table are based on the gross area of the section.
- (2)** The mean thickness of flange is computed according to Note 2 in Table II of IS : 800-1956.
- (3)** The maximum allowable moment is computed on the basis of the allowable stress specified in 9.2.1. of IS : 800-1956 and the gross modulus of section (Z_{xx}) given in this Table.
- (4)** The maximum allowable shear is computed on the basis of the allowable shear stress specified in 9.3.2. and the effective sectional area defined in 20.6.2.2. of IS : 800-1956.

- NOTE :** (1) The properties given in this Table are based on the gross area of the section.
(2) The mean thickness of flanges is computed according to Note 2 in Table II of IS : 800-1956.
(3) The maximum allowable moment is computed on the basis of allowable stress specified in 9.2.1. of IS 800-1956 and gross modulus of section (Z_t) given in this Table.
(4) The maximum allowable shear is computed on the basis of the allowable shear stress specified in 9.3.2. and the effective sectional area defined in 20.6.2.2. of IS : 800-1956.

*The weights per metre of bars given in the table are calculated on the basis that steel weighs 7.85 g/cm³ at 0.077 N/cm² and are rounded off to one decimal place in kg.

Note 1—The safe loads given in this Table are tabulated for ratio of slenderness up to but not exceeding 250.

2—The values on the right side of the zig-zag dotted line are for ratio of slenderness exceeding 180.

3—This Table is based on the requirements specified in 18.9.1.1 of IS : 800-1956.

Note 1—The safe loads give in this Table are tabulated for ratio of slenderness up to but not exceeding 250.

2—The values on the right side of the zig-zag dotted lines are for ratio of slenderness exceeding 180.

3—This Table is based on the requirements specified in 18.9.1.1 of IS : 800-1956.
